

ABSTRACT OF THE DISCLOSURE

Disclosed is a personal air cleaning apparatus which sucks, in a concentrated fashion, air present in a contaminated zone, and outwardly discharges the sucked air or supplying filtered air to the zone, thereby securing a local clean zone. The apparatus includes a sucking/discharging unit having a suction port for sucking contaminated air, and a discharge port for discharging filtered air, a filter for outwardly discharging air received from the sucking/discharging unit while supplying clean air via the sucking/discharging unit, a conduit for connecting the sucking/discharging unit to the filter, and a position determining member arranged around the conduit unit and adapted to allow the conduit unit to be bent without being folded, while fixing the position of the sucking/discharging unit.
